DETAILED ACTION

Drawings

1. Figures 5A-7C should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 7-12 are objected to because of the following informalities:

Re. Claim 7: After the phrase "at the second speed" as recited in line 7, change a comma "," to --;--.

After the phrase "the head down" as recited in line 8, change a comma "," to --;--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3729

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 7-9 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Applicant Admitted Prior Art.

Applicant Admitted Prior Art (APA hereinafter) teaches a process of controlling a contact load comprising steps of: moving a head (30) down by a predetermined distance (such as 0.1 mm/s) at a second speed (a low speed) as shown in Fig. 5A; measuring the contact load after moving the head down; and determining whether the measured contact load has reached the target contact load, the moving and measuring being repeated until the measured contact load reaches the predetermined target contact load as shown in Fig. 6 (see also specification, line 16 on page 2 to line 8 on page 4).

As per claim 8 the head of APA is moved down by the predetermined distance (such as 0.1 mm/s) and measured the contact load like every 0.1 mm/s. Therefore, the head is inherently halted for a predetermined period of time after moving the head down and before measuring the contact load.

As per claim 9 the predetermined distance is adjustably set in accordance with the target contact load as shown in Figs. 7A-7C.

As per claim 12 the measuring of the contact load is repeated until a different contact load (such as the target contact load) is reached as shown in Figs. 7A-7C.

Allowable Subject Matter

5. Claims 10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to disclose the claimed invention such as a second predetermined distance is smaller than a first predetermined distance, wherein the predetermined distance is set at the first predetermined distance when the measured contact load is zero, the predetermined distance and is set at the second predetermined distance when the measured contact load exceeds zero. It is not obvious taken alone or in combination of other references fairly to suggest the claimed invention.

Conclusion
